## Initial Lithium Resource Estimate for Macusani Plateau Uranium Project

Plateau Uranium has released an initial all-categories NI 43-101 lithium resource estimate of 140 million tonnes grading 0.126% Li<sub>2</sub>O equivalent, for 175,740 tonnes Li<sub>2</sub>O equivalent (Indicated + Inferred, Table 1).

- The initial lithium resources outlined may hold the potential to enhance the economics of the January 2016 PEA (Table 3) of PLU's Macusani Plateau uranium project as a by-product, but this will require significant additional study to determine the real potential. Initial independent metallurgical testing of 2 samples (with grades similar to the average Li resource grade) indicated recoveries into leach solution of 69% and 73% of the contained Li at 250°C using sulphuric acid at atmospheric pressure. Additional in-house testing by PLU achieved reported recovery into solution of up to 86% of the contained Li, but test parameters, including temperature, sample grind size, and acid concentration/consumption, were not given for internal work.
  - With initial metallurgical testing for lithium recovery being performed at significantly higher leaching temperatures (250°C, atmospheric pressure) than the January 2016 PEA studying uranium heap, and tank leach scenarios (ambient temperature / pressure) (Table 4), it is difficult to assess the potential additional processing and power requirements, and therefore the potential economic benefits, without further study, but it represents an intriguing area for further study. No precipitation work has been completed as yet to determine if lithium carbonate (Li<sub>2</sub>CO<sub>3</sub>) and potassium sulphate (K<sub>2</sub>SO<sub>4</sub>) can be precipitated out of the leach solution, although PLU reports that the independent testing agent\* believes the leach solutions produced from the test samples were similar in chemistry / characteristics, to that of current lithium producers, and "should be capable of lithium carbonate precipitation and production". (\*Independent tests -> K-UTEC AG Salt Technologies, Sondershausen, Germany)
- The lithium resource itself appears to be material enough to warrant further study to determine its potential to enhance the preliminary economics at the Macusani Plateau uranium project as a by-product:
  - To add some very high-level perspective, the Li<sub>2</sub>O equivalent contained resources of 175,740 tonnes (Ind. + Inf.), equate to ~434,600 tonnes of lithium carbonate (Li<sub>2</sub>CO<sub>3</sub>), which has a current mid-bid/ask price of US\$3.40/lb (see Table 2, Exhibit 1), or ~US\$7,496/tonne. This implies an in-situ value for the lithium resources of ~US\$3.2 billion, based on Haywood-calculated lithium carbonate equivalents (see Table 2). We caution that this number is calculated and presented simply for illustration purposes, as producing a lithium carbonate of the quality and grade required to fetch this price is a technical challenge in-and-of itself, and the implied value does not account for recoverability or costs. What this number does do is provide a high-level starting point for determining which direction PLU should go with this. In our view, follow up work to study exploitation potential and the true value of the lithium at the Macusani Plateau uranium project is justified.

Please see rating structure, important disclosures, risk profile parameters, disclaimers, and notes on pages 6-7 of this report.

\$0.10

- The initial lithium resource estimate is calculated for only 4 of PLU's 14 uranium deposits, and only for tonnage contained within the existing uranium resource area of the January 2016 PEA (at 75ppm U cut-off, See Table 1).
- The average potassium grade included in the lithium resource estimate is 3.71% K for the Indicated resource and 3.73% K for the Inferred resource.
- PLU comments that the lithium resources in the initial estimate reflect only a subset of the tonnage within the total uranium resources (Table 5) defined at the Macusani Plateau project (as stated above, the lithium resource estimate only considers 4 of the 14 defined uranium deposits; those which are part of the January 2016 PEA). PLU indicates that lithium carbonate  $(Li_2CO_3)$  and potassium sulphate  $(K_2SO_4)$  would be the potential by-products precipitated from the sulphuric acid leach, and is currently in the planning phase of additional engineering test work to determine the potential for this. PLU indicates that the presence of lithium is strongly correlated with uranium mineralization in its deposits, and appears to be "present in all of the uranium deposits' host rocks". PLU plans to commence a program to evaluate its other uranium deposits for the presence of lithium.
- The January 2016 PEA, which did not consider any by-product production, outlined compelling economics at a uranium price of US\$50/lb U<sub>3</sub>O<sub>8</sub>, including lower-quartile uranium mine operating costs globally at US\$17.28/lb U<sub>3</sub>O<sub>8</sub>, for a +6 Mlb p.a. U<sub>3</sub>O<sub>8</sub> mine, which would place it among the top 5 current uranium mines globally in terms of production scale. 2016 PEA-update base-case highlights below (details in Table 3):
  - CAPEX: US\$299.8 M, sustaining CAPEX of US\$43.9 M
  - **OPEX:** LoM OPEX US\$17.28/lb U<sub>3</sub>O<sub>8</sub>
  - Production Rate: 6.1 Mlb per annum for 10 years (10.9 Mtpa heap-leach)
  - NPV: Post-Tax NPV<sub>8%</sub> of US\$603 million
  - IRR: Post-Tax IRR of 40.6%
  - Pay-Back: 1.76 years post-tax

Sources: Haywood Securities, Plateau Uranium

The PEA provides four (4) additional scenarios beyond the base-case (Table 2). Each of the 4 scenarios are reduced-production, lower-CAPEX options vs the base-case, each returning compelling OPEX numbers. Additional scenarios include 2 additional heap-leach options and 2 tank leach options. Both additional heap and tank-leach options under study include 2 variations: a) open-pit-only; and, b) open-pit-plus-underground. The tank-leach option was of interest, as it is expected to yield improved recoveries of ~93% (vs 88% in heap-leach assumption), and is also assumed to have a decreased plant footprint vs the base-case heap-leach scenario.

## **Important Information and Legal Disclaimers**

This report is neither a solicitation for the purchase of securities nor an offer of securities. Our ratings are intended only for clients of Haywood Securities Inc., and those of its wholly owned subsidiary, Haywood Securities (USA) Inc. and such clients are cautioned to consult the respective firm prior to purchasing or selling any security recommended or views contained in this report.

Estimates and projections contained herein, whether or not our own, are based on assumptions that we believe to be reasonable. The information presented, while obtained from sources we believe reliable, is checked but not guaranteed against errors or omissions. Changes in the rates of exchange between currencies may cause the value of your investment to fluctuate. Past performance should not be seen as an indication of future performance. The investments to which this report relates can fluctuate in value and accordingly you are not certain to make a profit on any investment: you could make a loss.

Haywood Securities, or certain of its affiliated companies, may from time to time receive a portion of commissions or other fees derived from the trading or financings conducted by other affiliated companies in the covered security. Haywood analysts are salaried employees who may receive a performance bonus that may be derived, in part, from corporate finance income.

Haywood Securities, Inc., and Haywood Securities (USA) Inc. do have officers in common however, none of those common officers affect or control the ratings given a specific issuer or which issuer will be the subject of Research coverage. In addition, the firm does maintain and enforce written policies and procedures reasonably designed to prevent influence on the activities of affiliated analysts.

### **Dissemination of Research**

Research reports are disseminated either through electronic medium or in printed copy. Clients may access reports on our website, or receive publications directly via email. Haywood strives to ensure all clients receive research in a timely manner and at the same time. It is against our policy for analysts to discuss or circulate their recommendations internally prior to public distribution. This policy applies equally to recommendation changes, target changes and/or forecast revisions.

**For Canadian residents:** Haywood Securities Inc. is a Canadian registered broker-dealer and a member of the Investment Industry Regulatory Organization of Canada, the Toronto Stock Exchange, the Toronto Venture Exchange and the Canadian Investor Protection Fund and accepts responsibility for the dissemination of this report. Any Canadian client that wishes further information on any securities discussed in this report should contact a qualified salesperson of Haywood Securities Inc.

**For U.S. residents:** This investment research is distributed in the United States, as third party research by Haywood Securities (USA) Inc. Haywood Securities (USA) Inc. is a wholly owned subsidiary of Haywood Securities Inc., registered with the U.S. Securities and Exchange Commission, and is a member of FINRA and the Securities Investor Protection Corporation (SIPC). Haywood Securities (USA) Inc. as a U.S. registered broker-dealer accepts responsibility for this Research Report and its dissemination in the United States. Any U.S. client that wishes further information on any securities discussed in this report or wish to effect a transaction in these securities should contact a qualified salesperson of Haywood Securities (USA) Inc. Haywood Securities Inc. Research Analysts are considered Foreign Research Analysts to the USA and are not registered/qualified as Research Analysts with FINRA. As these analysts are considered Foreign Research Foreign Research Analysts *they may not be specifically subject to FINRA* (formerly NASD) Rule 2711 and FINRA (formerly NYSE) Rule 472 restrictions on communications with a Subject Company, Public Appearances and trading securities held by a Research Analyst Account.

There are no state security registration restrictions on the distribution of this report.

## **Analyst Certification**

I, Colin Healey, hereby certify that the views expressed in this report (which includes the rating assigned to the issuer's shares as well as the analytical substance and tone of the report) accurately reflect my/our personal views about the subject securities and the issuer. No part of my/our compensation was, is, or will be directly or indirectly related to the specific recommendations.

# Important Disclosures

Of the companies included in the report the following Important Disclosures apply:

- As of the end of the month immediately preceding this publication either Haywood Securities, Inc., one of its subsidiaries, its officers or directors beneficially owned 1% or more of Plateau Uranium Inc. (PLU-V).
- Haywood Securities, Inc. has reviewed lead projects of Plateau Uranium Inc. (PLU-V) and a portion of the expenses for this travel may have been reimbursed by the issuer.
- Haywood Securities, Inc. or one of its subsidiaries has received compensation for investment banking services from Plateau Uranium Inc. (PLU-V) in the past 12 months.

Other material conflict of interest of the research analyst of which the research analyst or Haywood Securities Inc. knows or has reason to know at the time of publication or at the time of public appearance:
